

Transforming Urban Landscapes: A Journey towards Smart Cities at the 6th ASEAN Smart City Network Annual Meeting

We are thrilled and deeply honored to have been an integral part of the 6th ASEAN Smart City Network (ASCN) Annual Meeting, proudly supporting the Ministry of Home Affairs Republic of Indonesia in hosting this remarkable event in the breathtaking locale of Bali, Indonesia. As we immersed ourselves in the gathering of change-makers, we firmly believe that forums like ASCN pave the way for decision-makers to adopt innovative solutions in overcoming urban challenges.

One of the standout moments of the conference was the gala dinner, gracefully hosted at ASECH Indonesia as part of the Jimbaran Hijau on Wednesday, July 12, 2023. It served as a warm welcome to all delegates while introducing the concept of the "smart city playground" - a tangible showcase of a green city that not only captivated the senses but also became a hub for learning, collaboration, and even residence!

This year's gathering opened its doors wide to experts, academics, and solution providers from across the globe, inviting everyone to contribute their expertise in shaping the cities of the future. The establishment of the ASECH Center of Excellence on Smart City in 2022 stands testament to our unwavering dedication to sharing our vision and beliefs, promoting goodwill, and uniting good-hearted individuals to take positive actions that will create a lasting impact, not just within Jimbaran Hijau, Bali-Indonesia but also echoing across the world.

A significant aspect of our journey towards realizing this vision has been the invaluable guidance and inspiration provided by thought leaders and think tank experts. Their insights have been instrumental in propelling us forward in this endeavor.

As we continue to traverse this transformative journey, we extend an earnest invitation to all to join hands with us in empowering communities and paving the way for a brighter tomorrow. Together, we can make a profound difference and foster a future where cities are not only technologically advanced but also sustainable, inclusive, and prosperous for all.

Let's create smart cities that stand as beacons of progress and prosperity, setting new standards for urban living while nurturing the harmony between nature and innovation. The path ahead may be challenging, but with united efforts and collective goodwill, we can build cities that inspire, enrich, and uplift the lives of generations to come.
